Patent No. 665886

GRENEAL INFORMATION:
APPLICANT: Scholler, John
TITLE OF INVENTION: COMPOUNDS AND METHODS FOR TREATMENT AND
TITLE OF INVENTION: DIAGNOSIS OF CHLAMYDIAL INFECTION
FILE REFERENCE: 210121.469C6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            FOR TREATMENT INFECTION
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Indels

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                     Woods D.F., Bryant P.J.;

The discs-large tumor suppressor gene of Drosophila encodes a woods D.F., Bryant P.J.;

Type discs-large tumor suppressor gene of Drosophila encodes a gramplate kinase homolog localized at septate junctions.";

Cell 66:451-464(1991).

Cell 66:451-464(1991).

General folial problem of the presence of a gramplate kinase domain suggests involvement in cellular adhesion as well as signal transduction to control cellular proliferation.

Required for maintenance of cell polarity.

CHOPLASMIC FACE OF THE MEMBRANE IN THE CELLULAR BLASTODERM AND BENGES ASSOCIATED WITH SEPTATE JUNCTIONS WHICH BEGIN TO FORM BEYMEN EPITHELIAL CELLS THE SPEATE DURCTIONS WHICH BEGIN TO FORM BEYMEN EPITHELIAL CELLS THE TIME OF DORSAL CLOSURE. IN ADULT FILES, LOCATED AT THE APICAL-LATERAL MEMBRANE BOUNDARY OF EPITHELIAL CELLS.

CELLS.

Isold=P31007-1; Sequence-Displayed;
TISSUE SPECIFICITY: In embryos, expression is seen in epithelial
cells and some nervous tissue. In larvae, expression is seen as a
belt around salivary glands and imaginal disks, also in
proventriculus and parts of the brain. Expressed in adult
proventriculus and parts of the brain. Expressed in adult
throughout tissues.
DBVELOPMENTAL STAGE: Expressed both maternally and zygotically
throughout development.
SIMILARITY: EBLONGS TO THE MAGUK FAMILY OF CELL JUNCTION PROTEINS.
SIMILARITY: Contains 3 PDZ/DHR domains.
SIMILARITY: Contains 1 SH3 domain.
SIMILARITY: Contains 1 guanylate kinase-like domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   epithel...; N

SIMILARITY: Contains 1 immunoglobulin-like V-type domain.
SIMILARITY: Contains 1 C-type lectin family domain.
SIMILARITY: Contains 1 C-type lectin family similarity: Contains 1 Sushi (SCR) domain.
SIMILARITY: BELONGS TO THE AGGRECAN/VERSICAN PROTEOGLYCAN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             similarity).

DOMAIN: TWO GLOBULAR DOMAINS, G1 AND G2, COMPRISE THE AMINO TERMINUS OF THE PROTEOGLYCAN, WHILE ANOTHER GLOBULAR REGION, G3, MAKES UP THE COOH TERMINUS. G1 CONTAINS LINK DOMAINS AND THUS CONSISTS OF THREE DISULFIDE-BONDED LOOP STRUCTURES DESIGNATED AS THRE A, B, B' MOTIFS. G2 IS SIMILAR TO G1. THE KERATAN SULPATE (KS) AND THE CHONDROITIN SULFATE (CS) ATTACHMENT DOMAINS LIE BETWEEN G3 AND G3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MEDLINE-86250699; Pubmed-2424993;

Partial CDNA sequence encoding a globular domain at the C terminus of the rat cartilage proteoglycan...

1 Biol. Chem. 261:8108-8111(1986)...

1 FUNCTION: THIS PROTEOGLYCAN IS A MAJOR COMPONENT OF EXTRACELLULAR MATRIX OF CARTILAGENOUS TISGUES. A MAJOR FUNCTION OF THIS PROTEOR NOT STORESTOR TO REALTH AND THE PROTEOR PROFESSION IN CARTILAGE. IT BINDS AVIDLY TO HYALURONIC ACID VIA AN AMINO-TERMINAL GLOBULAR REGION. MAY PLAY A REGULAROR FOLE. IN THE MATRIX ASSEMBLY OF THE CARTILAGE.

1 SUBURDILATIOR FOLE IN THE MATRIX ASSEMBLY OF THE CARTILAGE.

2 SUBCELLULAR LOCATION: Secreted; extracellular matrix (By
